

PATIENT INFORMATION

AZACLEAR™

[AZELAIC ACID + NIACINAMIDE] Cream

Read this information before starting use of this cream. If you have any questions please ask your aesthetic physician or pharmacist. Store below 25°C (77°F).

What is AZACLEAR cream?

- Azaclear™ emollient cream is a cosmeceutical dispensed by your physician. It may be used as indicated by your doctor for blemished skin, sun damaged, aging and excessively pigmented skin. It contains a high concentration of azelaic acid complexed with niacinamide.
- Azaclear™ is ideally used by patients who are using a total skin care program including avoiding sun, and using sunscreen on a daily basis.
- Azaclear™ does not work for everyone and may work better for some patients than others. It may take several weeks to months for the optimum effects to be appreciated. Hyperpigmentation is made worse by daily low level or extreme ultraviolet light. It is therefore very important to use photoprotective measures such as hats and sunscreen every day.

Who should not use AZACLEAR?

- If you have a sunburn or eczema wait until your skin has fully recovered. AZACLEAR™ may cause irritate burned or severely inflamed skin.
- If you are allergic to any components of AZACLEAR™ The ingredients are listed both on the product box and container.

How should I use AZACLEAR™ cream?

- Use AZACLEAR™ cream under the guidance of your physician preferable as a part of a total skin care program including minimizing sun exposure and daily use of sunscreen. Sunscreen with at least an SPF 15 or higher along with an effective UVA blocking agent such as zinc oxide, Mexoryl™ or Helioplex™ is suggested.
- Apply only a small amount of AZACLEAR™ both morning and night, as tolerated. AZACLEAR™ night therapy was especially formulated to increase skin hydration overnight and aid in the natural water balance of the skin. In the morning after washing the face with a mild cleanser, allow several minutes for the skin to fully dry. Once fully dry, apply Azaclear day therapy.
- Slight tingling can occur in some people. This is normal and will tend to diminish with continued use.
- Wash your hands after applying AZACLEAR™.
- Keep Azaclear out of your eyes and mouth. If gets into your eyes, rinse thoroughly with water. Contact a physician if irritation persists.
- If you miss a dose, do not attempt to catch up, simply continue your normal schedule of twice a day application.
- You may continue to use facial moisturizers if necessary or desired, makeup and gentle skin cleansers.
- Do not apply more AZACLEAR™ than instructed. Applying more product than necessary will not result in faster or improved results.
- If you are using products such as astringents, alcohols, acids, skin dipillatories, electrolysis, waxing or other skin products with strong drying effects, skin irritation may result.
