

Beautiful Skin with the help of Organics.

Finally a product that is effective, tolerable and helpful for many stubborn conditions. Azelaic acid is a naturally occurring organic acid derived from wheat, barley and rye grains. Azelaic acid visibly improves the appearance of aging, blemish prone and pigmented skin. Aza Clear®, unlike most cosmeceutical products, contains a high concentration of azelaic acid for effective cosmetic results. Aza Clear® is available directly from your aesthetic physician or skin care specialist's office.

Niacinamide is a member of the B vitamin group. It has been found to possess skin brightening properties. Niacinamide supports the natural processes of the skin to provide a more youthful look.

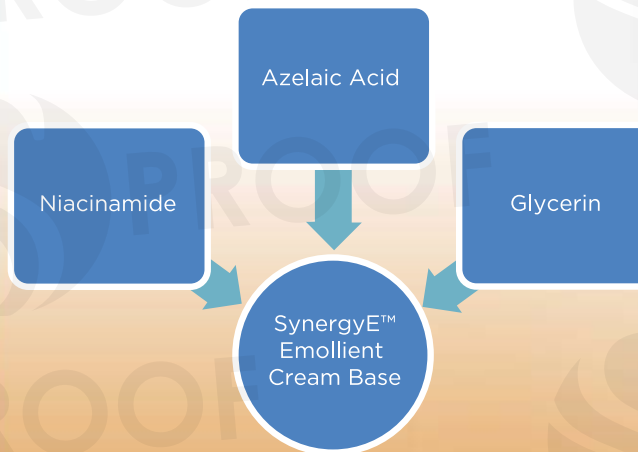

Glycerin aids the skin's intercellular moisture balance and slows or prevents excessive drying and evaporation to help maintain homeostasis.

BENEFITS

- Diminishes the appearance of fine lines and wrinkles •
- Visibly reduces the appearance of breakouts •
- Targets a more even skin tone •

The SynergyE™ difference.

Aza Clear® is so unique it uses patent-pending cosmetic technology. SynergyE™ is the non-irritating cosmetic emollient cream base that allows the complexing and micronizing of the three essential components of Aza Clear. SynergyE™ enables the potent cosmetic ingredient, azelaic acid, to be delivered safely to the surface of the skin in high concentration while maintaining optimum skin hydration. Irritation of the skin is avoided. Prior prescription azelaic acid creams required use of chemicals which damaged the surface barrier of the skin such as propylene glycol and SD alcohol. The Aza Clear® formulation avoids these irritating additives.

Aza Clear® was designed to eliminate the potential for irritation caused by azelaic acid of sensitive, acne or rosacea prone, ethnic and pigmented skin. Niacinamide acts synergistically with azelaic acid to enhance the delivery of both to the skin's surface. In fact, you can feel a slight tingling when you first apply Aza Clear®. This may diminish with continued use. It is part of the patent-pending process that makes Aza Clear® work so well.

Study on file. 71 subjects, Fitzpatrick skin types II-VI, ages 21-65. No subjects demonstrated irritation.

The safety, efficacy and stability of Aza Clear® is important. The superior results of the formulation are a direct result of the ingredients chosen, how the ingredients interact and the quality of the manufacturing process. From the outset, our mission was for Aza Clear® to contain the highest quality ingredients. The facility where Aza Clear® is manufactured is FDA registered and meets the stringent CGMP (Current Good Manufacturing Practices) for the production of pharmaceuticals. Although the CGMP practices are a requirement of all pharmaceutical manufacturing, they are more stringent than what is required for production of a cosmetic or cosmeceutical product. The manufacturing process of Aza Clear® ensures product purity and consistency.

PATIENT INFORMATION

AZA CLEAR® (AZELAIC ACID + NIACINAMIDE) Cream
Read this information before using this cream. If you have any questions please ask your aesthetic physician or pharmacist.

What is AZA CLEAR® cream?

Aza Clear® emollient cream is a cosmeceutical product dispensed by your physician. It may be used as indicated by your doctor for blemished, sun damaged, aging and excessively pigmented skin. It contains a high concentration of azelaic acid complexed with niacinamide.

Aza Clear® is ideally used by patients who participate in a total skin care program including minimizing sun exposure and daily use of sunscreen.

Aza Clear® does not work for everyone and may work better for some patients than others. It may take several weeks to months for the optimum effects to be appreciated. If hyperpigmentation is present, it can be worsened by daily low level or extreme ultraviolet light exposure. It is therefore important to use photo protective measures such as hats and sunscreen.

Who should not use AZA CLEAR®?

If you have a sunburn or eczema wait until your skin has fully recovered before using this product. AZA CLEAR® may irritate sunburned or severely inflamed skin. Avoid use if you are allergic to any components of AZA CLEAR®. Product ingredients are listed on both the container and box.

How should I use AZA CLEAR® cream?

Use AZA CLEAR® cream under the guidance of your physician, preferably as a part of a total skin care program which includes minimizing sun exposure and daily sunscreen use. Sunscreen with an SPF 15 or higher rating that includes an effective UVA blocking agent is suggested. Apply only a small amount of Aza Clear® both morning and night, as tolerated. Aza Clear® night therapy is especially formulated to increase skin hydration overnight and aid in the natural water balance of the skin. After washing the face with a mild cleanser, allow several minutes for the skin to fully dry. Once dry, apply Aza Clear®. Slight tingling may occur. Transient tingling is normal and will tend to diminish with continued use. Wash your hands after applying Aza Clear®. Keep Aza Clear® out of your eyes and mouth. Rinse eyes thoroughly with water if contact occurs. Keep Aza Clear® out of reach of children.

Notify your physician if irritation persists. If you miss a day, do not attempt to catch up; simply continue your normal schedule of twice a day application. You may continue to use facial moisturizers as desired. Aza Clear® is compatible with makeup and gentle skin cleansers. Do not apply more Aza Clear® than instructed. Applying more product than necessary will not result in faster or improved results. If you are using products that may dry or irritate the skin such as astringents, alcohols, acids, skin depilatories, or other skin products with strong drying effects, skin irritation may result.
